Database Systems Engineering & Distributed Backend Development (25CS1302E)

Under the Guidance of: Course Faculty Guide

Agenda

- Recap
- Implementation Modules
- Screenshots / Working Demo
- Current Progress

Recap — Review 2

- Methodology: requirement gathering → schema design → DB creation → backend → frontend.
- Architecture: presentation, application, data-access, and database layers.
- Database design: Product, Category, Supplier, Warehouse, Stock, and Transaction tables.

Implementation — Modules

- **Module 1: Product & Category**
 - Add, edit, delete, and search product and category records. Enforces category_id foreign-key links.
- **Module 2: Supplier & Warehouse**
 - Manage supplier contacts and warehouse locations; links suppliers to the products they provide.
- **Module 3: Stock & Transactions**
 - Records stock-in/out transactions, auto-updates quantities, and flags low-stock items.

Screenshots / Working Demo

- **Home / Login Page**
- **Product Dashboard**
- **Add / Edit Product**
- **Supplier & Warehouse View**
- **Stock Transaction Form**
- **Low-Stock Alert View**
- Live demo of the working prototype will be shown during the review.

Current Progress

- Overall Progress: ~70%

Project Component	Status
Problem Identification	Completed
Literature Survey	Completed
Database Schema Design	Completed
Module 1 — Product & Category	Completed
Module 2 — Supplier & Warehouse	Completed
Module 3 — Stock & Transactions	In Progress
Frontend Integration	In Progress
Testing	Pending
